

TO GET STARTED

There are 3 main categories:

Bio Releases

Weed Infestations

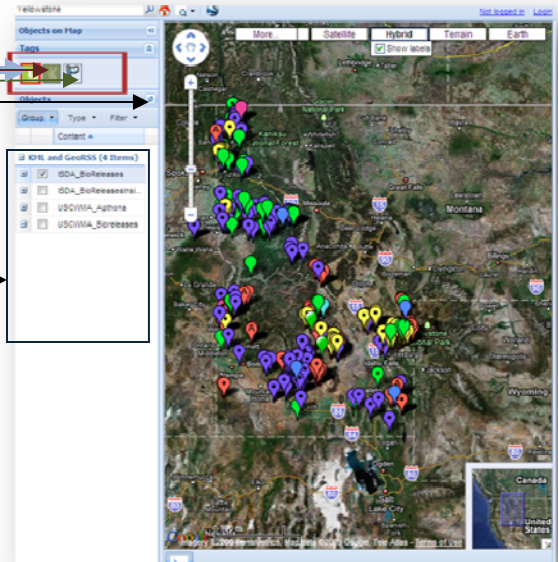

Land Layers

Click on the category of interest and hit refresh.

Open the KML and Geo RSS item in the legend. This lists all of the available layers for your map.

Turn on the layer you want to see and then click on the layer name to center your map on that layer.

Every time you click on a new layer the map will center itself on the bounding coordinates of that layer.

TO SWITCH CATEGORIES

Click on the new category of interest:

Bio Releases

Weed Infestations

Land Layers

This adds a new red box around the icon.
Having multiple icons highlighted will mean you can see all layers from both of those categories in the legend.

Then click on Refresh

The map layers available to view from your selected map categories will be added to the legend. You can check on the ones you want to see and then click on the layer name to center your map on that layer.
